

Factsheet

Specification

Investment goal

The investment goal of the SafePort Loick Bio-Product & Bio-Energy Fund is primarily to achieve the highest possible long-term asset growth. To this end, the fund acquires and disposes of investments permitted under its investment policy. It is an actively managed fund without reference to a benchmark.

Investment policy of the fund

In order to achieve its investment objective, the Fund invests its assets primarily in companies operating in the renewable energy sector (e.g. bioenergy, solar energy, hydrogen, bioproducts, etc.) and which are actively seeking to establish, grow or transform themselves. For this purpose, the Fund is permitted to invest all or part of its assets directly or indirectly in private equity investments, partnership investments, private equity holding companies or in other types of mezzanine financing and other forms of loan financing as well as in various private equity strategies.

Investment strategies of the fund

These strategies include providing seed capital to early-stage companies (venture capital), providing follow-on or expansion financing to development-stage companies (growth capital), and providing financing to companies facing special situations, such as restructuring (special situations). The fund may access investment opportunities through direct investments or co-investments. In particular, a special niche model is pursued: Poorly managed bioenergy assets are acquired at a favorable liquidation price. The bioenergy plants, which are thus usually fully owned by the fund, receive subordinated shareholder loans from the fund at a high fixed interest rate. Private equity investments involve additional risks besides the usual market, credit and liquidity risks of traditional investment funds.

Key figures

Administration

Asset manager	SafePort Asset Management Ltd., St. Vincent
Fund administration	CAIAC International Ltd., St. Vincent
